

**САНКТ-ПЕТЕРБУРГСКИЙ НАЦИОНАЛЬНЫЙ
ИССЛЕДОВАТЕЛЬСКИЙ УНИВЕРСИТЕТ ИТМО**

Дисциплина: Бек-энд разработка

Отчет
Лабораторная работа №2

Выполнил: Митурский Богдан Антонович

Группа: K33392

Проверил:
Добряков Д. И.

Санкт-Петербург

2024 г.

Задача

Необходимо будет реализовать RESTful API средствами express + typescript (используя ранее написанный boilerplate).

Ход работы

Заполним связь с основным роутами

```
const router = require("express").Router();

router.use("/user", require("./user"));
router.use("/statuses", require("./statuses"));
router.use("/interface", require("./interface"));
router.use("/lobby", require("./lobby"));
router.use("/waitRoom", require("./waitRoom"));
router.use("/game", require("./game"));
router.use("/shop", require("./shop"));
router.use("/health", require("./health"));

module.exports = router;
```

Добавим все необходимые роуты в путь /user

```
import { checkSignMiddleware } from "../../middlewares/checkSign";

import getUser from "./getUser";
import openChest from "./openChest";
import replaceCard from "./replaceCard";
import unlockChest from "./unlockChest";
import watchAd from "./watchAd";
import rating from "./rating";
import season from "./season";
import friendsRating from "./friendsRating";
import bonuses from "./Bonuses";
import bonusesOk from "./BonusesOk";
import online from "./online";
import setCompleteTutorial from "./completeTutorial";
import getBoughtProducts from "./getBoughtProducts";
import lottery from "./lottery";
import replaceEmotionCard from "./replaceEmotionCard";

const router = require("express").Router();

router.use(checkSignMiddleware);

router.get("/get", getUser);
```

```

router.post("/getBoughtProducts", getBoughtProducts);
router.get("/replaceCard", replaceCard);
router.get("/replaceEmotionCard", replaceEmotionCard);
router.get("/unlockChest", unlockChest);
router.get("/openChest", openChest);
router.get("/watchAd", watchAd);
router.get("/analytics", watchAd);
router.get("/rating", rating);
router.get("/season", season);
router.get("/friendsRating", friendsRating);
router.get("/bonuses", bonuses);
router.get("/bonusesOk", bonusesOk);
router.get("/online", online);
router.get("/completeTutorial", setCompleteTutorial);
router.get("/lottery", lottery);

module.exports = router;

```

Подготовим middleware авторизации, которые будет поддерживать вход из 3х соц сетей (Одноклассники, ВКонтакте, Телеграм)

```

import { IGetUserIDAuthInfoRequest } from "../types/request";

Вывод

В рамках выполнения работы удалось реализовать RESTful API средствами express + typescript (используя ранее написанный boilerplate). Были разработаны все необходимые для функционирования бекенда эндпоинты.
